Neither TECO Foundation, including any member who has worked on this White Paper or TECO Foundation Innovative Technology Arrangement &/or Services or involved in developing TECO Foundation Innovative Technology Arrangements or related project (if any), nor any service provider shall be liable for any kind of direct and indirect damage or loss whatsoever which you may suffer in connection with accessing this White Paper.

The White Paper is intended for general information purpose only and does not constitutes a prospectus, an offer document, an offer of securities, a solicitation for investment, or any offer to sell any product, item, or asset (whether digital or otherwise). The information herein below may not be exhaustive and does not imply any element of a contractual relationship. There is no assurance as to the currency or completeness of such information and no representation, warranty or undertaking is or purported to be provided as to the accuracy or completeness of such information.

Nothing contain in this White Paper is or may be relied upon as a promise, representation or undertaking as to the future performance of TECO Foundation and its Utility Token.

No part of this White Paper is to be copied, reproduced, distributed or disseminated in any way without any prior written consent of the Foundation. All acknowledgements go to TECO Foundation.

Executive Summary

TechCollect has created a unique and decentralized community with its own comprehensive collection of world changing blockchain technology. Utilizing smart contracts and a self-governing structure, this community and its “TECO Token” establishes a collection of innovative technologies which contains a collection of impressive, socially-impactful, and valuable blockchain tokens. Every TECO Token purchaser is a part of that community and every TECO Token is backed by that collection of innovative technologies.

It establishes a symbiotic relationship with the best blockchain projects available. By purchasing the tokens of incredible blockchain projects and holding them in a collection of innovative technologies, this community of token holders adds established value, quality, and diversity to their backing collection of innovative technologies.

The tokens this community holds are issued by impressive organizations that offer innovative solutions for the world. TechCollect, and its TECO Token Project, will select tokens which are maintained by an exceptional team, product and an ethical vision that our community can support. TECO Token and its collection of innovative technologies is not just for the experts on blockchain to participate. The token holders form a sociable community that helps direct the collection of innovative technologies. This community provides education and unbiased information to its members. They vote on great board and team members and ITA managers to oversee the day-to-day operation of the decentralized organization, the blockchain, and the collection of innovative technologies.

Highlights

This type of community is called a DAO. It stands for Decentralized Autonomous Organization. But there is much more to this organization than this simple definition. This DAO aims to make participating in dozens of applications utilizing this revolutionary technology as easy as downloading an app. It is an organization that is secure, accessible and easy to join. And it is run by the token holders for the token holders. Holding a single TECO Token makes you a member of this community.

Who we are

This is not a company! This is an organization where each TECO Token holder can help decide what this collection of innovative technologies and token will represent. Does it represent tokens that support clean energy or a new type of electric grid, does it change the way we think about self-governance or the way we think about engaging with independent contractors or freelance entrepreneurs. Will it support decentralized currencies? Does it engage with ethical businesses aiming to solve 21st century problems? Will this collection of innovative technologies hold tokens that will change the future of the planet for the better? The community will support innovative blockchain projects, many of which may very well change the world we live in for the better

Mission Statement

TECO Token aims to provide value by establishing world-wide convenient and fair access to a decentralized community with its own diverse collection of valuable, useful, and socially-impactful blockchain technology.

The Vision

The TECO Token is the access key to a unique community which controls an actively managed collection of blockchain tokens. Think of it as a token representing dozens of the best blockchain projects and tokens available. Each TECO Token holder will help guide the organization and elect its leaders.

The Token

The Tokens provide value through access and voting rights to manage an TECO Token Holder's Decentralized Autonomous Organization (DAO). A DAO is not a company, this token is not controlled by anyone except for the token purchasers. The organization sets forth decentralization as an important principle. Never to grant ownership of itself to a particular business or individual.

The Concept

Our Token is the first easily accessible token fully backed by the best of blockchain. The Token is created in a 1:1 ratio with a collection of innovative technologies controlled by the community. That collection of innovative technologies purchases and holds a diverse collection of both established and newer blockchain projects that are deemed valuable by our community. The community will hire the day to day managers of the collection of innovative technologies and operations. All of the Ethereum contributed by the members is transferred and held in other blockchain project's tokens, specifically the ones that show the potential to grow in usefulness and value. The blockchain smart contracts allow that collection of innovative technologies to be guaranteed and auditable with updated statistics delivered instantaneously.

The Mission

This Token decentralizes and transforms the concept of holding a collection of blockchain tokens. It re-humanizes it by not simply algorithmically selecting the top tokens by market cap but rather by selecting the ones with principle and projects that our own community believes in. It de-corporatizes the decision making by enabling the token holders to self-manage, self-govern, and self-develop while providing them with the resources to self-scale. It revalidates the notion that a diversified blockchain project backed token can be established, it can reduce volatility through competent partnerships and associations. This token aims to provide intrinsic and audible value for the token owners. It does this through the transparency of blockchain and the transparency of the community managed organization we have established to maintain it.

Diversified

TECO Token's backing blockchain tokens are diversified. All of the Ethereum raised from every token sold goes into acquiring tokens representing the best blockchain projects and tokens the community has to offer. This enables each TECO Token represent many different useful, valuable, and socially-impactful blockchain tokens.

Unique

This establish a new and unique type of collection of innovative technologies. A "Community-Controlled, Actively Managed Collection of Innovative Technologies" composed of various blockchain tokens for TECO token holders to manage as a means to quantify the value of the community's token. By utilizing smart contracts the TECO Organization gives value to each TECO Token by tying it to a percentage of this completely scalable collection of innovative technologies.

Community Controlled

Being an TECO Token holder entitles you to a proportional interest in the organization. Each TECO Token is a vote for board members and on community affairs such as the direction of the community collection of innovative technologies. This enables the community to choose the best ways to self-manage and self-acquire the best blockchain tokens available.

Practical

This community will elect its own leaders and team members and compensate them with a small portion of the Ethereum proceeds from TECO Token purchases. The organization must always keep this fee for collection of innovative technologies management at 1%. This enables the community to be confident their Ethereum contributions are being managed wisely. Token Holders deserve to have their Ethereum contributions exchanged for tokens representing the most deserving projects as backing assets instead of seeing the proceeds go to some founding company's annual balance sheet.

Open

The same smart contracts that provide value to the token also provide openness and visibility. These easily auditable contracts require the 99+% of the Ethereum dedicated to the collection of innovative technologies from each token purchase to be transferred automatically into the current proportions of the backing tokens for that transaction to be processed.

Quality-Backed

By choosing the best projects through community and conversation and by choosing our own competent leaders to manage the collection of innovative technologies. We are not forced into a one size fits all collection of blockchain assets but rather the ability as a community to participate in in the most worthy blockchain projects. This token will be desired by crypto-exchange participants and by existing token holders as a less volatile holder of blockchain value than current alternatives by maintaining this collection of innovative technologies of the best tokens and making it securely and conveniently available to anyone worldwide.

Existing Environment

The era of daily parabolic growth for cryptocurrencies has passed and the demand for an actively managed collection of innovative technologies comprised of the best that this industry represents is higher than ever. Most new tokens being released are weighted with too much of the profits going to the founding team. True asset backed tokens with reduced volatility exist but are often inaccessible, available only to accredited token purchasers, or sold out in the pre-sale or ICO only to available marked up later to interested token purchasers who did not get to partake. Almost all token releases are hard capped and incorporate a high retainage of ICO proceeds via tokens generated. Existing cryptocurrency based indexes and funds incorporate high fees and expenses into their team or token purchaser packages. Their customers are limited to the top “20” cryptocurrencies or some other “impressive” new algorithm or metric.

These types of tokens don’t encourage the community of token holders to have input in the collection of innovative technologies and pick the tokens with a socially impactful mission that they believe in. They all hold a significant portion of the ICO proceeds, which typically translates into a situation where new tokens can never be created. This means the community lacks core values and is specifically designed not to grow. It’s not only the lack of community and collective wisdom, but the closed-door and diminishing or non-existent value propositions that most people reject as well. Not one regular main street individual want to buy this stuff.

Imagine a wall street Index Fund saying they can’t add new customers because they charged the fund’s investors a 13% at the onset and if they created any more shares of their fund based on the value of the assets they wouldn’t get their 13% cut! They go on to say they are hoping people will pay more for their collection of innovative technologies in less regulated secondary markets. These are simply poor investments selling strategies disguised as intelligent cryptocurrency investments, often with fees that the token issuers would never agree pay themselves. That is not to say these funds are all bad, some have made great gains for their token purchasers as the market skyrocketed. But times have changed.

We believe due diligence and association with the best projects available, regardless of size or market cap, will be a wise decision in this exciting new era. And we believe that the potential token purchasers of the future deserve something better. To demonstrate the value that we want to create, we would like to outline some weaknesses of other similar tokens and identify room for improvement.

High Fees

Almost all current cryptocurrencies have one thing in common, the initial team holds an inflated portion of the wealth. It’s all the same, whether it is 10%, 20%, or 50% retained for the founding team. The fact is that many times significantly less than that and even occasionally 0% retained for the founding team can still lead to a successful project. It is important to outline to token purchasers exactly why the teams need the portions that they do, whatever that percentage might be. We simply accept this pillaging of our initial contributions. Teams get compensated with 15,000,000USD worth of a token at its inception and have not yet had to succeed at their “business” by delivering a working product. This creates a myriad of problems; founding teams becoming too greedy, forced holding limits on when ICO participants can buy and sell and downright scams and get rich quick schemes meant to benefits only the founders of that particular token. Fortunately, there are many cryptocurrencies available that are not guilty of poor management and

actually own something with true value potential. Finding and following these tokens can be hard work, it's tough to hear through all the noise, and the news is constantly changing.

Lack of Low Volatility Tokens

In the current cryptocurrency market there is also a lack of diversified low volatility tokens available. The market has shifted from unsustainable growth to daily ups and downs. In order to prevent massive changes in value, current holders must constantly switch tokens and pay exchanges fees, while keeping a constant eye on the market. Most existing and potential blockchain token holders are not interested in becoming day traders. Most of these individuals simply want to enjoy the long term robust growth and potential of the cryptocurrency market and witness the exciting future of blockchain applications in general. Missing a single tweet can cost a token holder 30% of their holding's value.

Problems do not only exist for newly rookie and novice members of the cryptocurrency community. Even those interested in day trading have a desire for more stable tokens for when they are not watching the charts. Current alternatives face regulatory issues and trust issues. They often fail to deliver a true asset backed token, proving to be fake currency with claims of being tethered to a real one. These current asset backed tokens are always owned by one team or one organization, who controls all of the wealth and an unjustly skewed percentage of the profits or takes an unnecessarily large portion at the beginning. Sometimes a team of 5, who has yet to prove themselves, gets 10% of a \$50,000,000 ICO. This may be fair in some circumstances but it is completely unnecessary in an asset backed token. Most people expect to see a team succeed *before* they all become millionaires.

No Actively Managed Collection of Innovative Technologies

Another missing element is a fair actively managed collection of innovative technologies in the crypto market, allowing interested participants to purchase a diversified group of tokens in a single transaction. Certainly companies exist to charge a high percentage at some point in the process for low effort required and simple luck of the market overall results. What's lacking is a true actively managed collection of innovative technologies by an organization attempting to identify the best, not necessarily the biggest, tokens available. Properly managed collections of innovative technologies with fees or founder holdings less than 15% really do not exist. The blockchain community as a whole should not accept this as the only option. Often greed is to blame.

Part of the problem with these collections of blockchain tokens or coins, is not just the fact that a, yet-to-succeed team may be getting a little too heavily compensated, it also complicates the collection of innovative technologies. It forces you to take one big pot of the initial token purchaser's contributions at the beginning, divvy it up and then create the right number of tokens proportionally, with token purchasers and founders grabbing percentages for themselves. They attempt to make them rare, sell out at some limited or invitation-only stage and then try to sell the tokens above the value contributed to them. They all say no additional tokens can ever be created. We believe a collection of innovative technologies and tokens that is scalable without diminishing its value is needed. Many of these current collections of blockchain tokens, managed by for-profit companies, are legally unclassified as they act like an entire brokerage firm and security selling company. This applies in most major economies, unless you are an institutional token purchaser. They also get tied up in more complicated regulation because they are a company, not a token! They are surely set up first to make profit for themselves regardless of if they, second, make money for the token holders. That's not the only way to structure these types of projects.

Solution

TECO Token

The Access Token to a Comprehensive Collection of World Changing Blockchain Technology

Each TECO Token will represent a percentage of this collection of innovative technologies.

1:1 Ratio

As new units of TECO Tokens are issued, new shares of the backing project's tokens will be purchased.

Transparent

The blockchain transactions for the token will serve as both the TECO ledger and also act as a smart contract proof of work system for the collection of innovative technologies to ensure additional backing tokens are purchased and held as required. This information and the blockchain transactions will be public and verifiable by anyone. The TECO Token will establish the initial collection of innovative technologies by retaining the entirety of all pre-sale tokens in an Ethereum only collection linked to the token and then investing that in the other tokens once enough Ethereum has been raised and final procedures for acquisition and storage of the initial collection of assets is implemented.

Fair

The token purchasers contributions will be utilized as follows: Token Holders = 99% directly into the collection of innovative technologies. Management Team = 1% of total contribution. This is a key difference between TECO Token and other company owned Tokens. It enables TECO Token to be infinitely scalable, without diluting the token's value. This enables anyone to purchase a token without paying a premium on its associated value to the backing collection of innovative technologies.

Self-Governed

This token will then act as a managed collection of innovative technologies in which the individual token holders can vote, based on their holdings, on decisions including which tokens contribute into the collection of innovative technologies, TECO organization board members, organization employees, token generating protocols and other decisions related to the betterment of the collection of innovative technologies.

Value Proposition

Blockchain Token

TECO Token is an actual token. It is not a business, it is not an investment. This statement is profound. Every other version of a diversified "crypto" portfolio fails to pass that simple test. That simple test is why there are no easily accessible blockchain funds on the major exchanges yet and why none of those diversified portfolios currently being offered is available in the US (many are also unavailable in the EU, China, and Singapore, Japan, and Korea). They are

unregulated investments, they are considered too risky and untrustworthy for the mainstream. TECO Token is not a business, it is not an investment. It is a blockchain token.

Asset-Backed

The concept is simple, when you exchange an “amount” of Ethereum for TECO Tokens, that same “amount” is divided up into the specific tokens comprising the collection of innovative technologies. This token is created via specific smart contract fulfillment built on top of the Ethereum Blockchain using Aragon’s toolkit for building decentralized organizations. The value of the token at any given moment is the combined sum of a collection of blockchain tokens which is currently held divided by the number of tokens in the market. It can be bought and sold at any time for that amount plus a small transaction fee established always to remain less than or equal to 1%. The token will be created when purchased and the fractional percentages of each token which composes the backing collection of innovative technologies are instantaneously added. This makes TECO Token infinitely scalable.

Exchange Friendly

TECO Token will be easy to purchase and use and also exchange friendly. TECO Token is safe for high volume clients. TECO token is immune to market manipulation by high volume clients. A buy and sell wall can never exist. No one would sell a token for less than the value of the collection of innovative technologies divided by total number of tokens and no one will ever have to pay more than that same established value to purchase one. They will be easy to acquire at fair value. TECO Token’s collection of innovative technologies is well diversified. It is safe enough to hold through market ups and downs. It is also a stable holder of value for traders to move their self managed collection of blockchain tokens into temporarily when they are not actively watching the market.

Community-Controlled

TECO token holders can be assured they are backed by a quality team: themselves. TECO token holders have the right to binding vote on major policy directives. This is profound. Other collections of blockchain tokens are not tokens themselves and are certainly not decentralized. No votes are even considered by the owners or companies or investment managers. Each TECO Token is a vote. The token holders are the voice of the direction of the collection of innovative technologies. The token holders make the decisions when it is time to vote on key policies and most importantly elect the foundation board members to represent their interests.

Talent

The necessary compensated positions will exist for those who manage the organization, the platform, the blockchain and the collection of innovative technologies full-time for the community. They can be contracted to manage the collection of innovative technologies year round and compensated by utilizing the small community management fees. They can be compensated in tokens via smart contracts for their work. And if they fail the community, then the community has a right to remove them; they are simply members of the token holders’ organization elected to represent the people. Regular employees will not be needed because TECO Token is not a company.

Accountable

TECO Token will be auditable. This is also profound. There will always be a 1:1 Ratio between the value of the

collection of innovative technologies and the value of the entire supply of tokens. Unlike some “asset” or “dollar” backed cryptocurrencies. This collection of innovative technologies is legitimate; there is no reason any token holder should not be able to determine the exact value of their tokens based on their percentage of the collection of innovative technologies. None of the pre-sale or the future buyers will ever be forced to hold their tokens for a predetermined amount of time. That essentially establishes a future possible “apocalypse” date. TECO token doesn’t offer fake sales or discounts to early contributors. Each token is backed by other blockchain projects and tokens, the price already represents the true value by definition, no gimmicks are necessary.

Voting

Another major appeal of TECO token is the voting rights. The staking mechanism is directly tied to token holdings. Each TECO token has an associated voting right for major decisions regarding the collection of innovative technologies, including voting on a board of directors to manage the collection of innovative technologies at least once annually with all positions voted on within two years, or as otherwise determined by the community.

The voting rights and board allow the token to adapt as necessary, remove old or less popular tokens from the holding portfolio and move to newer tokens, or to move into safer more risk adverse options as the community sees fit. It’s unlikely that all members will choose to vote, many newer less involved members of the cryptocurrency community will appreciate the competently managed collection of innovative technologies.

The voting mechanisms help enforce one of the most important aspects of this token. The collection of innovative technologies must act in the best interest of the token holders, if the board of directors or team members fail to deliver for the community, the community has the right to replace them. This is one of the main differentiators between TECO token and signing up for an existing cryptocurrency based investments or other collections of blockchain tokens which are owned and controlled by a company.

Exchanges

As a token that aims to be a secure holder of value with an established growth proposition. TECO Token aims to maintain the same symbiotic and friendly relationship with the tokens and associated blockchain projects that we hold. TECO Token will provide a highly sought token for their customers which can be easily implemented into their exchange. We also purchase the tokens of exchanges that deliver high value propositions as part of our collection of innovative technologies. TECO Token will be able to establish a market where it can be traded and the exchanges will see increased customer growth and purchase of their exchange specific tokens.

Overview

Initial tokens and all tokens issued in perpetuity would be 100% backed by a collection of valuable, useful, and socially-impactful blockchain tokens.

The TECO organization will issue tokens as demand increases and use the proceeds to increase the size of the asset collection of innovative technologies so that each TECO Token would be backed by TECO organization's portfolio of blockchain tokens.

Token and Smart Contract:

The Genesis token will be a functioning, but simplified version of the final TECO Token. The genesis token will function as follows. Tokens will be available for the Ethereum purchase price p as indicated on the website. The fee will be reduced to 0.5% as an incentive. The smart contract itself will automatically contribute 99.5% of the Ethereum into the collection of innovative technologies and 0.5% into the community management fees. Updated verification that the collection of innovative technologies has grown in value based on the contributing Ethereum block size will be available on the website and via the public blockchain as soon as blocks are processed. The genesis token will have the full functionality of the final token on the on the Eterheum Blockchain with real time value data done via Chainlink, the voting rights, and team compensation smart contracts will be established, and the basic token staking mechanisms will be established. The only difference is the fees will be reduced and the collection of innovative technologies will not move its Ethereum into the diversified collection of innovative technologies until the second stage.

In the second stage the Smart contracts will be updated to verify that the contributing Ethereum is not simply retained as 99+% Ethereum but properly divided into the established backing blockchain tokens that compose the collection of innovative technologies at any given time. The initial version of this smart contract will simply involve providing transaction records from addresses controlled by the collection of innovative technologies, purchasing the backing tokens during the creation of each referenced block. These transaction records will be hashed and incorporated into the creation of each new block.

<u>var</u>	<u>action</u>
bal	Pull TECO backing Asset Balance (v.0.1 will be two test net wallets, 1 ETH and 1 BTC; v1.0 will use mainnet wallets) <code><address>.balance {uint256}</code>
tt	Pull total number of TECO Tokens currently in existence v0.1 will be testnet TECO issuing smart contract address, v1.0 will be mainnet <code>function totalsupply(?)</code>
cpETH	Pull Ethereum current price from Chainlink Ethereum Price Feed Chainlink Aggregatorv3Interface (PriceConsumer V3)
cpBTC	Pull Bitcoin current price from Chainlink Ethereum Price Feed Chainlink Aggregatorv3Interface (PriceConsumer V3)
cvETH	Multiply balETH by cpETH to calculates total value of Ethereum in backing asset wallet

cvBTC	Multiple balBTC by cpBTC to calculates total value of Bitcoin in backing asset wallet
cvTotal	Add cvETH and cvBTC together yields total value of all backing assets
ctv	Divide cvTotal by tt yields current token value
Check	If <i>user wallet</i> has deposited ctv x 1.01 allow token to be minted
Mint	Mint token and deliver to <i>user wallet</i>

Potential for Future Advancement

As the technology advances and the collection of innovative technologies and team continue to succeed and grow, we hope to implement more advanced smart contracts that minimize the hands on involvement of the team and maximize the involvement of the blockchain. The initial version of the token will at a minimum use Chainlink to pull current value data of the backing tokens for every single block and mining reward distribution. This helps maintain our goal of remaining a decentralized organization that everyone can be a part of. As a DAO we look forward to the contributions this community makes to improving itself and providing value for its own members.

Fees

TECO Token will aim to be established with a mining fee structure that is set at 1% of the token value of each token minted (after the genesis token) for transactions through the platform so a purchaser of an TECO Token spends roughly 1/40th of the average cost of setting up a managed collection of innovative technologies elsewhere in the cryptocurrency market. Other managed collections of blockchain cryptoassetss charge percentages from 15-25% depending on a variety of factors. These collection of innovative technologiess do not have the consumer's best interest in mind. This is an integral part of the plan and the only way to guarantee the continued success of the token. These fees are comparable with the lowest of any collection in any market, crypto, fiat, stock or other exchange. This will help differentiate TECO Token as a managed collection of innovative technologies that truly cares about the value delivered to the individual token holders. Because of TECO Token's scalable structure we will break the small fee down into several "units" as opposed to "amounts" to cover anticipated expenses. As this token grows these tiny percentages will add up allowing TECO Token to grow their team to scale and make sure they are able to attract top talent to manage all aspects of the collection of innovative technologies.

Collection of Innovative Technologies

By intention, the most valuable aspect of the TECO Token is the blockchain entities and tokens which it chooses to include in the collection of innovative technologies. The collection of innovative technologies is the overall, best, effort of the community to participate in the most worthy projects and tokens that blockchain has to offer. The goal of the actively managed collection of innovative technologies is not to day-trade for the token holders. The goal is to use quality input and the same meticulous screening put into picking the tokens for the initial collection of innovative technologies into all of the blockchain tokens it chooses to hold in the future. We believe it also helps reduce volatility without reducing upward momentum.

TECO Token's collection of innovative technologies will contain proven and established blockchain tokens such as Ethereum and Bitcoin. They have proven themselves to be secure holders of value. TECO Token's collection of innovative technologies chooses to hold other top tokens, not necessarily based on their position in the top 20, 50 or 100, but rather based on the merit, value, honesty and transparency put forth by their project and their team in delivering a token with value or value potential. This Organization feels that these kinds of projects, and many others, are providing the world with something of real value. These are the kind of tokens that this Organization is looking to include in this collection of innovative technologies. Other blockchain entities excluding existing tokens, specifically the best upcoming project tokens based on merit, principle, deliverables, and value available could be added to the collection of innovative technologies as well. The "Best" for this Organization is not necessarily the biggest or the most valuable based on a chart or paragraph in a white paper, but a true intention and an even better plan of action executed by an even better team. Those are the types of blockchain project tokens that this organization intends to hold.

At any given moment:

The Value of a single TECO Token = x

The Value of the collection of innovative technologies = v

The total number of tokens in existence = t

$x=v/t$

Decentralized Team

Decentralized Autonomous Organization (DAO)

Each token holder is important to the organization. The DAO is the type of organization by which this collection of innovative technologies and the tokens are created and managed. “Decentralized” means that this blockchain entity is not owned by a particular company or organization or founding person, the first token holder of the organization is the first purchaser of a token. This organization does not exist without the token purchasers, they are the organization.

As conscientiously involved token holders, it is in the best interest of the token holders to vote wisely on decisions for the betterment of the collection of innovative technologies. One of the most important duties this voting will entail selecting the team token holders who will run the day to day operations and collection of innovative technologies management for the organization. All of the job descriptions required to run this organization are itemized and broken down into individual smart contracts and divided among the individual team units. They will be compensated through via the small community management fee upon satisfaction of the smart contracts. The community will be responsible for rewarding these smart contracts to qualified people or teams to complete them.

Community Elected Team

The initial team will consist of the following “units” to see us through the pre-sale, token launch, and first year of operations. This organization is still and will always be improving and adding to its team. The best team is not likely to be a single group of friends in one location but instead the best talent available, spread throughout the world. This organization will establish a team of specialized talent who believe in the principles of this organization. The team will be compensated according to the initial breakdown found on the following pages. The organization can later adjust these numbers by vote if needed.

Timeline

Community

It is time to build the community. Many potential token purchasers will be excited to learn about this token. This is the time for us to share the news with them.

TECO Token and Collection of innovative technologies Go Live!

TECO Token Full functionality 1.0 released

Token Specifics

Tokenization

There will be no-ICO. TechCollect intends on delivering a functioning genesis token. The genesis token will hold Ethereum only to build up the capability to start acquiring other innovative technologies. TechCollect will finalize its blockchain and web development and then TECO Token will issue its collection of innovative technologies based staking mechanism. From this point forward, purchases in Ethereum on the website will be blocked together and the smart contracts will automatically transfer the Ethereum into the individual tokens comprising the backing index of cryptocurrencies. Users will be able to log into their accounts on the TECO Token Organization's website, transfer their Ether and receive their tokens in a matter of minutes.

The no-ICO concept will be different from previous most previous token releases because individual token purchasers will not have to wait until completion of the ICO to acquire their tokens. The purchase process will involve a deliverable functioning token for anyone who participates.

The token will be fully functional providing access to the community and providing associated voting rights. It will be scaled in association with the collection of innovative technologies to maintain its value. This token positions itself to be a popular token choice for long term holders and short term holders alike.

Token Economics

Although the token is a utility token used to grant access to the organization, the collection of innovative technologies is a useful measurement to help associate value to the token. By setting up the utility token so that it is always scaled in a 1:1 ratio with the collection of innovative technologies, TECO Token establishes this value proposition.

At any given moment:

The Value of a single TECO Token = x

The Value of the collection of innovative technologies = v

The total number of tokens in existence = t

$$x=v/t$$

Example:

The collection of innovative technologies on at a given time is valued at 100,000 Ethereum

At the given time there are 2,500,000 Tokens in existence

The value of a token is

$$x=v/t$$

$$x=(100,000)/(2,500,000)$$

$$x=0.04 \text{ Ethereum}$$

The cost to buy a token in Ethereum p is the value x multiplied by the mining fee f so in our current example

$$p=xf$$

$$p=(0.04)(1.01)$$

$$p=0.0404 \text{ Ethereum}$$
